

RedButton V2.0 Release Notes
May 17, 2010

1. When running the Live-DVD, there are several apps that close and cause system notifications. One is gvfsd-metadata. Check the ignore box and click on the cancel button. Do not be alarmed.

2. Installation, either side by side with windows system or using an entire HDD is recommended since the installed system needs to be setup only once. The RBPVR application runs in the “ubuntu” account. So when installing type “ubuntu” as the account name.
